

**NEUROANEURYSM OCCLUSION AND DELIVERY DEVICE
AND METHOD OF USING SAME**

Abstract

5 A delivery device for delivering an implantable endoprosthesis with an
occlusion region for occluding fluid flow to a desired location in a body lumen. The
delivery device includes an outer sleeve and an inner tube terminating at a distal tip.
The distal tip is made of one of a dissolvable, bioabsorbable, or deformable
material. Upon deployment of the endoprosthesis at the desired location, the shape
of the distal tip is altered to a different shape and withdrawn through the constricted
10 region of the endoprosthesis.
